Kifissia Railway Station

Client: Athens-Piraeus Electric Railways (ISAP)
Cost estimate: EUR 1.8 m.

Full architectural design for the renovation and rehabilitation of the terminal station of the Athens to Piraeus Electric Railways. The area to be renovated amounted to 5,200 m2.

The design comprised the erection of canopies for the passenger platforms, a new building to accommodate the M&E installations and the operational requirements of the station, the renovation of the existing ticket hall, the Station Control building and the pedestrian underground passage, as well as boundary treatment and access and control points for the Station.
